SUMMARY

AI Product Lead. **10+ years turning complex systems into tools people use**, the last five shipping ML decision systems. **I build AI people can check**: the hard part is never the model, it is making the uncertainty visible so people can see the confidence and decide.

At Heineken's Global Analytics & AI Hub I was one of the first people in, and the hub grew from ~10 to 100+. I owned Promo Advisor from discovery to 17 markets (planning time down 30–40%) and shaped one decision loop for a ~€2.9B marketing budget. Three of us beat a top consultancy's ready-made product in under half a year.

Now hands-on with LLM agents hands-on with Claude Code and MCP at Yaga Labs. Before Heineken, five years in China: algorithmic design at MAD Architects and AREP, then client-facing lead in Guizhou, bringing in a ~70M RMB project in Mandarin.

WORK EXPERIENCE

AI Product Manager & Builder · Yaga Labs

July 2026 – Present • Poland

Agentic coding lab focused on AI transformation. Spec first: I write the spec, coding agents (Claude Code, MCP) build, I review every change. Built in public:

- **AI Elliott Wave Reader** (elliott.yaga.sh): systematic trading research; ranks the three most probable wave counts per time frame, each with its confidence.
- **Old Kostrzyn Reconstruction** (kostrzyn.yaga.sh): a destroyed old town rebuilt in 3D from historical plans and photographs.
- **Yaga Farm 3D** (game.yaga.sh): a browser game used as a sandbox for AI agents that steer creatures and generate worlds.

AI Product Lead, Global Analytics & AI Hub · The HEINEKEN Company

March 2021 – June 2026 • Amsterdam HQ, Netherlands (remote)

First product person in the hub, joining when it was ~10 people building dashboards nobody trusted. First two years: with data engineers, collapsed hundreds of overlapping Power BI dashboards into a small set of global ones with one shared design system.

- **The bet**: three of us (a business product owner, a data scientist and me) had under half a year to beat an external consultancy's ready-made product. Ran discovery across markets, prototyped in Figma on a command-line model with real Heineken data, won the C-level review. The hub was funded to grow to 100+.
- **Promo Advisor (what to promote)**: owned it from discovery to v2. Three modules, shipped to 17 markets. Planning time down 30–40%, cannibalisation down ~15%.
- **Allocation AI (where to spend)**: shaped the reboot of the consultancy-built allocator. Heineken publicly reports a 36% ROI improvement.
- **Smart Flighting (when to spend)**: strategic advisor; replaced an Excel process with an interactive timing simulator. Targets +1–1.5% net revenue.

Product Designer · Macopedia

January 2020 – March 2021 • Poznań, Poland (remote)

- Product and UX design for enterprise clients (Pearson, Macmillan Education, Raben Group). Worked directly with client stakeholders from start to finish: ran the user research, shaped the project plan together with the client, designed A/B tests to validate key design decisions, and presented and defended the results.

Project Manager & Business Developer, China · 7 International

May 2017 – December 2019 • Xingyi, Guizhou, China

- The company's face to Chinese clients: built the relationships (site visits, travel with clients, the dinners where business in China actually happens), gathered and managed requirements, and brought in a ~70M RMB residential project.
- Bridged the clients and a 6–10 person design team in Poland: translated requirements into briefs, reviewed the designs and made sure each could actually be built locally.

Senior Generative Design Engineer · AREP

June 2016 – May 2017 • Beijing, China

- Small R&D team set up to win design competitions with code. Wrote the scripts (Grasshopper, C#) that generated and compared options, treating each building as a program. Wins included Shenzhen's Gangxia North hub and the Chengdu EcoCity masterplan (first prize).

Generative Design Engineer · MAD Architects

February 2015 – June 2016 • Beijing, China

- Co-founded MAD's computational design group and built the studio's Grasshopper and Python tool library. Wrote optimisation code (genetic algorithms) that generated geometry from constraints: the Xinhee Design Center facade and the Harbin Opera House timber interior.

Project Manager, Poland · 7 International

January 2014 – February 2015 • Poznań, Poland & Guizhou, China

- First hire for the Polish office. After four months at the Guizhou HQ, built the office from zero and led a design team running a two-continent workflow: concepts in Poland, engineering in China.

SKILLS

Product: product management · product discovery & workshop facilitation · revenue growth management (pricing, promotion, marketing mix) · decision support · roadmapping & prioritisation · stakeholder management up to C-level · business development & negotiation

AI & tools: Bayesian & ML decision systems (with data science teams) · LLM agents · Claude Code · MCP · Python · Figma · Grasshopper · design systems

Languages: Polish (native) • English (C2) • Mandarin (B2)

EDUCATION

POZNAŃ UNIVERSITY OF TECHNOLOGY: M.Sc. & B.Eng., Architecture & Urban Planning
ISTANBUL TECHNICAL UNIVERSITY: Architecture, International Exchange

Data Processing: *I hereby give consent for my personal data to be processed by your company for the purpose of conducting recruitment for the position for which I am applying.*
