SUMMARY

Everybody uses a black box. Nobody argues with it. I open them. I was the first product person in Heineken's Global Analytics & AI Hub, where the models were right early and nobody trusted them. Three of us beat a top consultancy's ready-made product in under half a year, and the hub grew from ~10 people to 100+. I made the uncertainty visible, so revenue managers could run the scenario, see the confidence and decide: three production decision systems, one loop, built for a ~€2.9B budget.

Before that, five years working in China: algorithmic design at MAD Architects and AREP, then a 12-person team of architects and ~70M RMB of new work won in Mandarin.

WORK EXPERIENCE

AI Product Builder · Yaga Labs

July 2026 – Present • Poland

After five years shaping AI products, I'm building the other half myself: hands-on with LLM agents every day, using Claude Code and MCP. One rule across everything: the model reads and summarises, deterministic code decides.

AI Product Lead, Global Analytics & AI Hub · The HEINEKEN Company

March 2021 – June 2026 • Amsterdam HQ, NL (remote)

First product person in the hub, joining when it was ~10 people building dashboards nobody trusted. Foundation, first two years: with data engineers, collapsed hundreds of overlapping Power BI dashboards across operating companies into a small set of global ones, with upload tools and one shared design system.

- **The bet**: three of us (a business product owner, a data scientist and me) got less than half a year to beat an external consultancy's ready-made product. Ran discovery with commercial teams across markets, prototyped in Figma against a command-line model on real Heineken data, and won the C-level review. The consultancy was removed and the hub was funded to grow to 100+.
- **Promo Advisor (what to promote)**: owned it from discovery to v2. Three modules (Diagnostics, Scenario Simulator, Calendar Optimizer), shipped to multiple markets. Planning time down 30–40%, cannibalisation down ~15%.
- **Allocation AI (where to spend)**: shaped the reboot of the consultancy-built allocator in the same product language. Heineken publicly reports a 36% ROI improvement across brands and touchpoints.
- **Smart Flighting (when to spend)**: strategic advisor once the team had scaled. Replaced an Excel process with an interactive timing simulator; targets +1–1.5% net revenue.
- Shaped the three into one decision loop with one design language. The hard part was never the model: I made the uncertainty simulatable instead of hiding it, so revenue managers with 20 years of Excel habits could run the scenario, see the confidence, then decide.

Product Designer · Macopedia

January 2020 – March 2021 • Poznań, PL (remote)

- Designed web platforms in Figma for enterprise clients (Pearson, Macmillan Education, Raben Group). Built a reusable component library that let several client builds share one design foundation.

Project Manager & Business Developer, China · 7 International

May 2017 – December 2019 • Xingyi, Guizhou, China

- Led projects end to end between Poland and China. Won ~70M RMB of new work directly from Chinese clients, negotiating in Mandarin; built and led a 12-person cross-cultural team of architects.

Senior Algorithmic Designer · AREP

June 2016 – May 2017 • Beijing, China

- Part of a small experimental team inside AREP's ~120-person Beijing office, set up to win design competitions with algorithmic methods. Wrote the scripts (Grasshopper, C#) that let the team generate and measure options fast. Wins included Shenzhen's Gangxia North hub (220,000 m², one of China's largest underground transport hubs) and Chengdu EcoCity, a 21M m² masterplan that took first prize.

Algorithmic Designer · MAD Architects

February 2015 – June 2016 • Beijing, China

- One of two founding members of MAD's parametric design group; owned the internal Grasshopper tool library. Built the parametric model that generated the Xinhee Design Center's double-curved membrane facade, optimised for membrane cost and buildability, and the parametric timber interior of the Harbin Opera House, detailed to fabrication.

Operations Manager, Poland · 7 International

January 2014 – February 2015 • Poznań, PL

- First hire for the company's European office: set it up from zero (registration, documents, office, first hires) and sent design concepts to the teams in China.

SKILLS

Product: product management · product discovery & workshop facilitation · revenue growth management (pricing, promotion, marketing mix) · decision support · roadmapping & prioritisation · stakeholder management up to C-level · business development & negotiation

AI & tools: Bayesian & ML decision systems (with data science teams) · LLM agents · Claude Code · MCP · Figma · Grasshopper · design systems

Languages: Polish (native) • English (C2) • Mandarin (B2)

EDUCATION

POZNAŃ UNIVERSITY OF TECHNOLOGY: M.Sc. & B.Eng., Architecture & Urban Planning
ISTANBUL TECHNICAL UNIVERSITY: Architecture, International Exchange

Data Processing: *I hereby give consent for my personal data to be processed by your company for the purpose of conducting recruitment for the position for which I am applying.*
